QUESTION BANK

ON

TH3- CONTROL SYSTEMS ENGINEERING

**SEMESTER & BRANCH: – 6TH SEM, ELECTRICAL
ENGINEERING**

2 MARKS QUESTIONS

1. What is control system?
2. What are the types of control system?
3. What are the advantages of closed loop control system?
4. Define Transfer function.
5. What is pole & zeros?
6. What is servomechanism?
7. What is regulators?
8. What is effect of feedback?
9. Write down the advantages of transfer function?
10. What is block diagram?
11. Define SFG.
12. State the masons gain formula.
13. What is AC servomotor?
14. What is potentiometer?
15. Draw the diagram of closed loop control system
16. What are the different components of CLCS?
17. What is meant by analogous System?
18. What are the basic properties of signal flow graph?
19. What is a Feedback in Control System?
20. What is Routh Hurwitz Stability Criterion?
21. What is gain margin?
22. What is servo motor?
23. What is settling time?
24. What is time response?
25. What is rise time in control system?
26. What is peak time?
27. Define root loci.
28. Define stability.
29. Define transient response
30. What is Proportional control system?
31. What happens when a derivative controller applied to a Control system?
32. What is the need of root locus in control system?
33. What do you mean by Polar Plot?
34. What do you mean by Bode Plot?
35. What do you mean by Nyquist stability criterion?

GOVERNMENT POLYTECHNIC, BHUBANESWAR

DEPARTMENT OF ELECTRICAL ENGINEERING

5 MARKS QUESTIONS

1. Write down the differentiate between open loop and closed loop control system.
2. Write down the properties of Transfer Function.
3. Explain the working of potentiometer.
4. Explain the working of AC Servo motor.
5. Write down the different steps of block diagram reduction technique.
6. What are the different type of input and derive steady state error for step, ramp and parabolic input.
7. Derivation of time response specification for delay time, rise time, peak time, setting time, peak over shoot of a second order system.

8. Sketch the polar plot for $G(s) = \frac{20}{s(s+1)(s+2)}$.

9. The open loop transfer function of a unity feedback system is given by

$$G(s) = \frac{108}{s(s+4)(s^2+3s+12)}$$

Find static error coefficient and steady state error of the system when subjected to an I/P is given by $r(t) = 2+5t+2t^2$.

10. The open loop transfer function of system with unity feedback is given by

$G(s) = \frac{10}{(s+2)(s+5)}$. Determine damping ratio, undamped natural frequency of

GOVERNMENT POLYTECHNIC, BHUBANESWAR

DEPARTMENT OF ELECTRICAL ENGINEERING

oscillation and maximum overshoot in its step response.

11. Define gain margin, phase margin, gain cross over frequency & phase cross over frequency in a polar plot .
12. What is the effect of feedback on overall gain and stability?
13. State different type of controller with block diagram and represent them mathematically.
14. Examine stability of the following system given by $B(s) = s^5 + 2s^4 + 2s^3 + 4s^2 + 4s + 8$ using Routh-Hurwitz stability criterion
15. Write down the rules for constructing a root locus?
16. State the rules for plotting a polar plot?
17. Write down the procedure to draw a bode plot?
18. What is the need of a Nyquist plot , Explain with a suitable example,
19. Explain the properties, advantages, and disadvantages of transfer function?
20. Explain the properties of signal flow graph?
21. Explain the effect of feedback on control system?
22. Using Mason's gain formula, obtain the transfer function of a system whose signal flow graph is given in Figure.

23. Simplify the given block diagram as shown in Figure to a single block and obtain its transfer function

24. Find the transfer function of the following network.

25. Define the standard test signals used in control system. Write their laplace Transform.

GOVERNMENT POLYTECHNIC, BHUBANESWAR

DEPARTMENT OF ELECTRICAL ENGINEERING

10 MARKS QUESTIONS

1. Sketch the root locus plot of a unity feedback system with

$$G(s) = \frac{k}{s(s+1)(s^2+4s+5)}$$

2. What do you mean by PID controller and explain the time response with PID controller.

3. Apply Nyquist stability criterion to the system with open loop transfer function

$$\text{is given by } G(s)H(s) = \frac{1}{s(1+2s)(1+s)}$$

4. Obtain bode plot for the following function.

$$G(s) = \frac{1000}{s(1+0.1s)(1+0.001s)}$$

Determine the gain margin & phase margin of the system and also comment on the stability.

5. Explain constant M & N circle.
6. Examine stability of the following system given by $B(s) = s^4 + 5s^3 + 2s^2 + 3s + 1$ using Routh-Hurwitz stability criterion. Find the number of roots in the right half of the s-plane
7. Find the transfer function of the following network.

8. The loop transfer function of a system is given by $G(S) = \frac{K}{(1+S)(1+2S)}$

- Draw the Nyquist plot for $-\infty < \omega < \infty$
- Comment on closed loop stability of the system.

9. For unity feedback system, the loop transfer function is given by

$$G(S) = \frac{K}{(S+1)(S+2)}$$

- Plot the root locus for $0 < K < \infty$
- Comment on closed loop stability of the system.
